#### **ABSTRACT**

This guide was developed by the Environmental Protection Agency (EPA) to provide individual with information about potential administrative careers with the agency. The brochure's introduction presents an overview of the EPA and its involvement in setting environmental standards, standards enforcement and monitoring, and future trends in environmental protection. Subsequent sections describe administrative careers in the EPA, give personal accounts of a day in the life of an EPA administrator, list selected job titles and duties, present EPA job requirements, and explain how to apply for vacancies at the EPA. A list of EPA human resources offices is provided. (MDH)

AND YOUR EFFORTS ESSENTIAL TO FULFILLING

THE MISSION OF THE UNITED STATES

**ENVIRONMENTAL PROTECTION AGENCY.** 

# PRESERVING OUR FUTURE TODAY

EPA Highlighte

In 1974, the Safe Drinking Water Act (SDWA) authorized EPA to establish regulations to limit the amount of various substances in water used for drinking.

The 1987 Clean Water
Act amendments require certain industries to "pretreat" their wastewater so that toxic chemicals and other harmful substances do not enter sewage systems that were not designed to treat them.

The new Clean Air Act contains provisions for large reductions in emissions of sulfur dioxide and nitrogen oxides to combat acid rain. The new national goal for year 2000 is to reduce SO<sub>2</sub> emissions nationwide by 10 million tons.

The Resource Conservation and Recovery Act regulates hazardous waste from over 200,000 generators, through transportation, storage and treatment to final disposal. Hazardous waste handlers must now clean up contamination resulting from past waste management practices as well as from current activities.

Work is underway to reduce municipal solid waste through a combination of source reduction and recycling measures.

The 1990 Farm Bill could further reduce agricultural pesticide use and enhance environmental quality. This includes promoting more environmentally sound crop rotation practices, promoting research and education, and providing incentives for farmers to adopt more environmentally sound habits.

We're a dynamic team of diverse people dedicated to improving and preserving the quality of the environment. The United States Environmental Protection Agency (EPA) was founded in December 1970 to consolidate the government's environmental TRODUCTION TO EPA...

regulatory activities into a single agency. Over the past 20 years, EPA has greatly expanded its scope and responsibilities in meeting environmental challenges.

Located in Washington, D.C., EPA headquarters is divided into twelve offices: Office

of the Administrator; Office of Water; Office of Solid Waste and Emergency Response;

Office of Air and Radiation; Office of Prevention, Pesticides and Toxic Substances;

Hice of Research and Development; Office of Administration and Resources

Management Phoses Policy, Office of General Counsel; Office of Policy,

Panning and Evaluation office of International Activities, Office of Inspector

ine al. Il is conces develop environmental policies, set standards, manage complex

research and development programs, and develop regulations for pesticides, toxic

substances, hazardous wastes, air radiation and water. In addition, every EPA program

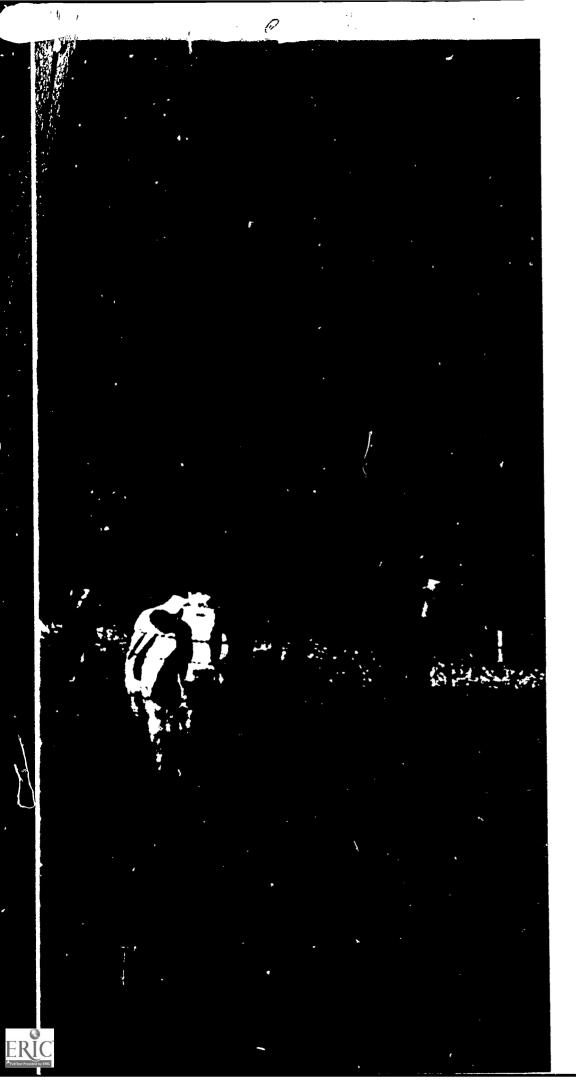

office is developing new technologies designed to prevent pollution. . There are also

ten Regional Offices which administer EPA programs and provide technical assistance

to state, local and tribal governments. World-class research and development in all the

environmental disciplines is carried out in our 20 research facilities. • At last count,

EPA employed almost 19,000 and the numbers continue to grow.

Treatment and disposal of waste are not enough; pollutants must be prevented from being generated in the first place. We have learned the inherent limitations of treating and burying waste. A problem solved in one part of the environment may become a new problem in another part. We must curtail pollution closer to its point of origin so that it is not transferred from place to place.

## SETTING STANDARDS

EPA is responsible for setting standards that help protect the public's health and welfare. Whether this involves restricting pesticide use or setting emission levels for automobiles, EPA is taking steps to ensure a cleaner future.

# ENFORCEMENT AND MONITORING

he Agency's philosophy has been to encourage voluntary compliance by private industry and communities, and ensure that state, local and tribal

Various types of monitoring processes and activities exist within EPA. Some

governments perform enforcement activities necessary to meet EPA standards.

are broadly based monitoring programs that determine whether pollution levels

and emissions are increasing or decreasing. Other methods of evaluation determine if the various abatement programs

RENDS For the Future efforts toward a cleaner environment and improved

human health have been vigorous. Worldwide, the belief that industry cannot endure the restrictions of environmental controls, is being replaced by an awareness of industry's role in nurturing the environment. • Protecting the planet is a huge commitment and to be successful it will take everyone working together. Complementing EPA's efforts have been state, tribal and local governments, citizen's environmental organizations, and countless individuals, many of whom have been working on pollution control for years. EPA has developed five new themes which reflect future directions for ensuring a cleaner environment: pollution prevention, voluntary action, reducing risks, economic incentives, protecting natural resources. It's time to develop a new pattern of environmental management — working with nature.

developed by EPA and state and local governments are as effective as they should be.

## GEOGRAPHIC LOCATIONS

EPA headquarters is located in Washington, D.C., one of the country's most culturally-rich areas. Although one-third of EPA's positions are in our nation's capital, we hire administrators at all ten Regional Headquarters and Field Offices. The Regional Offices are located in major cities throughout the U.S. with Field Offices and Labs located in areas that geographically and environmentally enhance each lab's mission.

# ADMINISTRATIVE CAREERS IN EPA

he future of the environment will require that diverse teams of professionals work together to meet the growing demands and challenges to preserve and, when possible, restore our environment. Individuals who have backgrounds in liberal arts,

business, accounting, law enforcement, education and many

other disciplines are essential to achieving EPA's mission.

Before choosing a career in the environmental field, consider

a few questions: What do you enjoy doing? Where do you excel?

How much education do you want to pursue? In other words,

narrow down your goals and then investigate the various jobs that

deal with improving the environment. There are many ways to find

out more about careers in the environment. Write or call any EPA

Human Resources Office for more information.

# A DAY IN THE LIFE OF . .

ello, my name is Eric. I work in OPPTS (Office of Prevention, Pesticides & Toxic Substances) as an environmental protection specialist (EPS). Although I'm considered a specialist, I'm learning new things every day. We've done some pretty harsh things to our planet. I know it takes dedication and discipline to be environ-

mentally responsible, but after

you've seen and heard some

of the things I have,

even consider the

wasteful lifestyle

you once did. 🌤

The most impor-

tant part of my job

as an EPS is to draft

and issue compliance

monitoring strategies. In other

words, if a pesticide is cancelled or

suspended, my job is to instruct the regional and state inspectors in what actions to take. Working with EPA has done a lot for me to further my goals. I was originally an attorney but wasn't feeling fulfilled. Now, I realize there are unlimited avenues for growth. I'm working with Susan in Human Resources to plot my career path at

Estelle "I'm a budget analyst for the Office of Inspector General (OIG). My primary responsibility is to determine whether budget allocations are being made within the confines of our guidelines and also to ensure

confines of our guidelines and also to they are in line with the primary goals of the Agency. If it sounds like a lot of number crunching, it is.

But, number crunching is what I enjoy. I like to see things balance. You might be surprised to know that there's actually a great deal of diversity in this kind of work. In the OIG we deal with

 $\gamma$  on-going basis.

every EPA office on

• Things have been changing so rapidly that my job has remained very challeng-

work I did in the past for a private

ing. : Although I truly enjoyed the

company, I find this is the work that makes me feel vital. Plus, the little extras are a real plus. Even though there are so many of us here, the benefits are very people and family-oriented — like the Flexible Work Schedule, which almost everyone who has a family uses. It's nice to know that if you want to, you can come in at 7:30 am and leave at 4 pm. It's the flexibility built into the Agency policies that enhances my family life. I'm very appreciative of that."

EPA. What more could I ask for?"

for you to investigate. Our scientific and engineering colleagues work closely with many other specialists to develop and implement program activities. Here at EPA, we have professionals from every background. You will find budget analysts, environmental protection specialists, education specialists, computer specialists, information resource specialists, program and management analysts, economists and human resource specialists to name a few of

Students seeking undergraduate degrees may prefer to major in traditional areas

rather than concentrate on environmental studies. Federal, state and local government agencies often hire persons from traditional fields and train them for environmental applications. Also, students with such educational backgrounds are in a strong position to compete for jobs in non-environmental companies if they are unable to find employment in environmental fields. 4 Most jobs at EPA are in the competitive service, which means that applicants compete with other candidates and must be evaluated by the Office of Personnel Management (OPM). In order to get on the appropriate lists, contact the nearest Federal Job Information Center to see whether applications are being accepted in your area for the kind of work you want. If you are not sure what kind of work you want, a job information specialist may be able to suggest the type of work for which you qualify, based on your education and experience. 10

the occupations which are needed to get the important work of EPA done. Each occupation has separate qualification standards depending on the position to be filled. The following page provides information on basic requirements for a few of the more common administrative occupations.

# SELECTED JOB TITLES AND DUTIES

If you have a specific occupational area you are interested in and it is not listed here, please contact any EPA Human

Resources Office for more information.

management. They are interested in identifying ways for the Agency to be more effective and reduce costs. Often they are required to travel to programs both inside and outside of the Agency. • Most of the accountants

at EPA are responsible for ensuring that debits and credits are posted to the proper accounts, correcting misapplied charges, and disbursing funds. Some accountants are involved in developing policies and procedures, and others work with computer specialists to design and maintain EPA's automated fistancial management systems.

A bachelor's degree in accounting or a bachelor's

A bachelor's degree in accounting or a bachelor's degree in a related field with 24 semester hours in accounting or a certain combination of work experience and education is required for entry-level positions.

Graduate degrees or specialized experi-

ENVIRONMENTAL PROTECTION SPECIALIST : There are over

2.000 environmental protection specialists (EPS) who perform a wide variety of duties at EPA. An EPS can be involved in anything from monitoring the implementation of environmental plans, to overseeing the

distribution and effectiveness of grants. Professionals in

this occupation work to conduct research related
to environmental programs with scientific

and engineering colleagues. • Due to the diversity of positions in this

occupational area, qualification

requirements are quite broad. Entry-level positions require

either a backelor's degree or general experience.

Superior communication

skills are a key for success in

this occupational area.

BUDGET ANALYST,

FINANCIAL SPECIALIST . If

you are interested in management of financial resources, these specialities would be

for you. Budget analysts formulate budget and cost

estimates to support program plans. A Contracting services are an integral part of getting the work done at EPA. In this capacity you to ould be involved in contracting with commercial and noncommercial sources for services and products to support EPA clients around the Agency. A Financial specialists perform a wide variety of work in support of the Agency's various financial functions. Many specialists are involved in development of financial policies and procedures, while still others design formats for reporting financial information and preparing financial reports for use by Agency management. A There are no specific degree requirements for these occupations. Entry level jobs are usually filled by individuals with a bachalor's degree and an interest in financial or budget areas. You may also qualify if you have three years of experience in relevant

administrativa or professional areas.

#### MANAGEMENT AND PROGRAM ANALYST

In these positions you would serve as a staff analyst.

ence is required for more advanced positions.

evaluator, or advisor to management. Management analysts work on administrative management matters such as organization design, distribution of work assignments and delegation of authorities. • As a program analyst you would be involved in planning, analyzing, and evaluating EPA programs and operations. You will set and assess program objectives and policies: measure work operations and progress; and develop resource estimates. Qualifications vary by position and grade. Entry-level positions require an undergraduate degree or appropriate experience which demonstrates qualifications for the specific position.

Advanced positions will require specialized experience or a graduate degree.

11

# HOW TO APPLY

workers and self-starters willing to persevere in any task undertaken. Entry-level positions start at grade levels 5 and 7 of the General Schedule. Nearly 100 different types of

occupations are filled through this program, using one of two

If you have an overall GPA of 3.5 or greater, or graduated in the top 10% of your class, you are eligible for non-competitive appointment for some entry-level positions (General Schedule grades 5 and 7) through the Outstanding Scholars Program. This allows you to submit your Application for Federal Employment directly to an EPA office in the geographic area of your choice. • A written examination

options: a written examination or

direct appointment based upon

superior academic credentials.

managed by the U.S. Office of Personnel Management (OPM) and the Administrative Careers with America (ACWA) is required for all other entry-level applicants except auditors and accountants. You can find out more about the examination, such as when and where it is given, by contacting your nearest OPM Federal Job Information Center, listed on this page or call (900) 990-9200. • Individuals who qualify for auditor and accountant positions should submit their completed Application of Federal Employment (Standard Form 171) to the nearest OPM facility to be rated for your occupational series. Once you have received your rating you may submit your application to an EPA office which has appropriate vacancies.
